

I was stuck in traffic, with a very harsh thunderstorm in the area, powerlines & traffic lights were out through out the area. If it were not for XM Traffic & Weather, I wouldn't have know which route to take to get out of the area... The way I was going, if I hadn't been averted from a major intersection, would have brought me into a dangerous flash flooded area.

Thanks XM Radio, you really came through!!! Please keep the weather & traffic. An entire station dedicated to it saved me from what very well could have been a serious situation. The local stations barely update weather on the hour, and only do traffic during rush hour. That just isn't enough when its an emergency situation.
